CANTI-RACK

Infinitely adjustable arms – Advantageous for uneven flooring.

Smooth connection between arm and post – no bracket to damage stock.

High safety factor – the greater the load, the stronger the arm grips.

Channel arms for larger support area – kinder to your products.

Easily and quickly installed – less disruption.

Structural steel columns – for safety and impact resistance.

Extensive range of accessories – end stops, pallet rails, decking angles, guide rails, etc.

The system can be designed for both single and double-sided operations. The arms are designed from 600mm right up to 1800mm long. As a safety feature, the base of the system is designed to be the same length, as that of the longest arms. The upright column is the strength of the system, and once the weight requirements are established, the correct arm loads calculated, the size of the column can be manufactured. There are two different options for this. A standard I.P.E or universal beam steel section is available. The Cantilever system can be either powder coated or, for outdoor applications hot dipped galvanized.
