# LIVE PALLET RACK

Acrow provides the Pallet Flow Systems and their supporting rack which in turn ensure a First in First out operation. This allows for the greatest pallet density possible and only a loading face and offloading face, thus keeping aisles to a minimum and forklifts out of the racking. A push-back system can also be accommodated.

Pallets can be stored up to 20 deep or more and have a mass of 1.5 tons. Brake rollers keep speed of descent in check and the last pallet is automatically separated from the others to keep the load off them and make it easy to remove from the rack. This system is particularly well suited for large quantities of the same product, which are date sensitive.
